

FexMaster

Installation

To run installation of FexMaster, download the installer file from web <http://www.imcep.com>.

FirebirdSQL database version min. 3 must be available. If the database already achiveable anywhere to create the database for storing application data you don't have to install it. If not you need to install it. To do it so, please, check the Firebird in the list during the installation process.

If the database engine is already installed anywhere you have an approach, you can use it by entering valid credentials when the application is started the first time.

If you expect to use FexMaster with Metatrader 5 you Will have to install also Metatrader 5 API. It can be done by checking it during the application process as an engine Metatrader 5 API. After the installation process you will have to copy the two files - Metatrader script "MT-API.ex5" and expert advisor "MT-HL.ex5" to the folders of Metatrader data. The both experts have to ne started in Metatrader and both run DLL files and allow trading must be allowed.

First steps

If you didn't install the FirebirdSQL because you already have this server available, please, input the credentials in the tab "Settings -> Database". Otherwise you can leave the default settings.

During a the first trial to connect to the database you will be asked for a database creation. If you already have the database from a previous version of FexMaster or from backup the database will be used.

It is necessary to connect to a broker system. There are three possibilities at the moment: API to FXCM broker, API to OANDA broker and a connection through the Metatrader terminal.

Metatrader 5 API

If you are going to start Metatrader 5 you will need to run the script MT-API. As soon as you start it for the first time you will be most probably asked by system firewall to allow the server provide connection since it is a TCP server running on a specific port, default 7894. The server can also run on other

computer than the FexMaster is installed. In that case change the host in the connection and also port if you entered the API to be started on.

OANDA

If you are trading on the OANDA system you will need to enter the token you can get on OANDA web pages. After that you press the button "Get accounts" to get a list of available accounts under the token. After this procedure the account you can connect to.
